## Independent Practice: SOLVING FOR SUPPLEMENTS \& COMPLEMENTS

NAME: $\qquad$ DATE: $\qquad$ PERIOD: $\qquad$

For \# 1-5, write and solve the equation that would be used to find the measure of the angle described.

1. Find the measure of an angle if its measure is $50^{\circ}$ more than its complement.

Equation: $\qquad$
$\mathrm{m} \angle \mathrm{X}^{\circ}=$ $\qquad$
$\mathrm{m} \angle \mathrm{Y}^{\circ}=$ $\qquad$
2. Find the measure of an angle if its measure is $20^{\circ}$ less than its supplement.

Equation: $\qquad$
$\mathrm{m} \angle \mathrm{X}^{\circ}=$ $\qquad$
$\mathrm{m} \angle \mathrm{Y}^{\circ}=$ $\qquad$
3. Find the measure of an angle if its measure is twice that of its complement.

Equation: $\qquad$
$\mathrm{m} \angle \mathrm{X}^{\circ}=$ $\qquad$
$\mathrm{m} \angle \mathrm{Y}^{\circ}=$ $\qquad$
4. Find the measure of an angle if its measure is triple the difference of $80^{\circ}$ and its supplement.

Equation: $\qquad$
$\mathrm{m} \angle \mathrm{X}^{\circ}=$ $\qquad$
$\mathrm{m} \angle \mathrm{Y}^{\circ}=$ $\qquad$
5. Find the measure of an angle if the measure of its complement is $47^{\circ}$.

Equation: $\qquad$
$\mathrm{m} \angle \mathrm{X}^{\circ}=$ $\qquad$
$\mathrm{m} \angle \mathrm{Y}^{\circ}=$ $\qquad$

## REVIEW PROBLEMS

For \#6 - 7, set up and solve an equation to determine the value of $\boldsymbol{x}$.
6. $x=$ $\qquad$

7. $x=$ $\qquad$

For \# 8-10, use the figure on the right to find the measure of the angle indicated.
8. $\mathrm{m} \angle 1=$ $\qquad$ -
9. $\mathrm{m} \angle 5=$ $\qquad$ $\circ$

10. $\mathrm{m} \angle 6=$ $\qquad$ ${ }^{\circ}$
