

Tw Geometry NOTES Angles.pdf - [Geometry: Week 1.3] Day 1 - Go PDF Reader

Page: 1 / 4

Content Objective: I will be able to name (using correct notation) and classify angles by their measures.

TERM	DESCRIPTION	EXAMPLE	HOW TO NAME IT
RAY	An object consisting of one endpoint and continues infinitely in one direction.		
ANGLE	An object consisting of two rays (called sides) with a common endpoint (called a vertex).		

EXAMPLE 1: Name each of the following:

Sides: \overrightarrow{BA} , \overrightarrow{BC}

Vertex: B

Angle: $\angle ABC$, $\angle CBA$, $\angle B$

CONSTRUCTION: Copy $\angle ABC$ and bisect it.

Sep 15-9:13 AM

Tw Geometry NOTES Angles.pdf - [Geometry: Week 1.3] Day 1 - Go PDF Reader

Page: 1 / 4

CONSTRUCTION: Copy $\angle ABC$ and bisect it.

EXAMPLE 2:

a. How does the diagram in Example 1 differ from the diagram shown below?

Ex 2 are adjacent angles

b. Name a point in the interior of $\angle QPS$.

c. Name a point in the exterior of $\angle QPS$.

Geometry Unit 1 - Essentials of Geometry Page 73

Page: 2 / 4

Notes: ANGLES

In item d. below, you would read " $m\angle QPR$ " as "the measure of angle QPR".

d. If the $m\angle QPR = 68^\circ$ and $m\angle RPS = 25^\circ$, what is the $m\angle QPS$? 93°

ANGLE ADDITION POSTULATE

If R is in the interior of $\angle PQS$, then $m\angle PQR + m\angle RQS = m\angle PQS$.

If $m\angle PQR + m\angle RQS = m\angle PQS$, then R is in the interior of $\angle PQS$.

EXAMPLE 3: If $m\angle PQS = 77^\circ$ and $m\angle PQR = 32^\circ$, then find $m\angle RQS$.

Sep 15-9:18 AM

Tw Geometry NOTES Angles.pdf - [Geometry: Week 1.3] Day 1 - Go PDF Reader

Page: 2 / 4

EXAMPLE 3: If $m\angle PQS = 77^\circ$ and $m\angle PQR = 32^\circ$, then find $m\angle RQS$.

$m\angle RQS = 77 - 32$
 $m\angle RQS = 45^\circ$

$m\angle RQS = 45^\circ$

EXAMPLE 4:

If $m\angle AOC = 70^\circ$, $m\angle AOB = (x + 10)^\circ$, and $m\angle BOC = x^\circ$, find the following values:

$x =$ _____

$m\angle BOC =$ _____

Sep 15-9:19 AM

EXAMPLE 4:

If $m\angle AOC = 70^\circ$, $m\angle AOB = (x + 10)^\circ$, and $m\angle BOC = x^\circ$, find the following values:

$x = 30$

$m\angle BOC = 30^\circ$

$m\angle AOB = 40^\circ$

$x = 30$

Page: 3 / 4

TERM	DESCRIPTION	EXAMPLE
acute	An angle that has a degree measure less than 90° .	\angle
right	An angle has a degree measure equal to 90° .	\angle
obtuse	An angle has a degree measure greater than 90° and less than 180° .	\angle
straight	An angle has a degree measure equal to 180° .	\angle

EXAMPLE 5: For each of the following angles:

a. Name it in two different ways

b. Tell whether its measure is $< 90^\circ$, $> 90^\circ$, $= 90^\circ$, or $= 180^\circ$

c. Classify it.

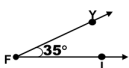

35°

125°

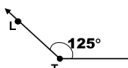

Sep 15-9:23 AM

Tw Geometry NOTES Angles.pdf - [Geometry: Week 1.3] Day 1 - Go PDF Reader

c. Classify it.

a. ANGLE: $\angle YFI$ OR $\angle IFY$ OR $\angle F$
 b. MEASURE: 35°
 c. CLASSIFICATION: acute

a. ANGLE: $\angle LTC$ OR $\angle CTL$ OR $\angle T$
 b. MEASURE: 125°
 c. CLASSIFICATION: obtuse

a. ANGLE: $\angle RTS$ OR $\angle STR$ OR $\angle T$
 b. MEASURE: 90°
 c. CLASSIFICATION: right

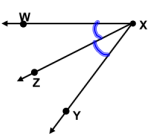

a. ANGLE: $\angle NXS$ OR $\angle SXN$ OR $\angle N$
 b. MEASURE: 180°
 c. CLASSIFICATION: straight

TERM	DESCRIPTION	EXAMPLE
ANGLE BISECTOR	A ray, line, or line segment that divides an angle into two <u>congruent</u> angles.	

EXAMPLE 6:
 If \overrightarrow{XZ} is an angle bisector of $\angle WXY$, name the two congruent angles that it forms. Use congruent marks to show which angles in the diagram are congruent.

$\angle WXZ \cong \angle ZXY$

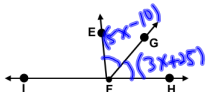

EXAMPLE 7:
 \overrightarrow{FG} bisects $\angle EFH$. Given the following expressions, set up and solve equations to determine the value of x.

Sep 15-9:26 AM

Tw Geometry NOTES Angles.pdf - [Geometry: Week 1.3] Day 1 - Go PDF Reader

EXAMPLE 7:
 \overrightarrow{FG} bisects $\angle EFH$. Given the following expressions, set up and solve equations to determine the value of x.

a. $m\angle EFG = (5x - 10)^\circ$
 $m\angle GFH = (3x + 25)^\circ$

b. $m\angle GFH = (3x + 20)^\circ$
 $m\angle EFH = (4x + 80)^\circ$

Handwritten work:

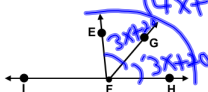

For (a):
 $5x - 10 = 3x + 25$
 $-3x \quad -3x$
 $2x - 10 = 25$
 $+10 \quad +10$
 $2x = 35$
 $\div 2 \quad \div 2$
 $x = 17.5$

For (b):
 $3x + 20 = 4x + 80$
 $-4x \quad -4x$
 $-x + 20 = 80$
 $-20 \quad -20$
 $-x = 60$
 $\div -1 \quad \div -1$
 $x = -60$
